Roxie McInnis, Development Services Manager spoke. PGM of TX LLC is proposing a replacement OSSF to serve an expansion for a recycling business at 4620 West Hwy 290 in Precinct 4. This property is Lot 3a in the Ladera Subdivision (2.84 acres). Water will be supplied by private well. This ON-SITE SEWAGE FACILITY consists of a standard treatment system in which the effluent will be pumped to a low pressure dosed dispersal field. The system is designed for a maximum of 375 gpd. The system designer, Derrick Lormand, R.S. is requesting a variance to Section 10-M(B) of the Hays County rules for on-site sewage facilities which requires flow equalization prior to the treatment tank. His justification for variance: This business establishment is open five days per week and there are not surge loads anticipated during normal business operations. I have oversized the septic tank volume, by 20%, to account for the flow equalization requirement. The larger tanks by definition allow for increased retention time and consequently act as a baffle to help negate surge loading. The designer respectfully requests a variance from the Hays County Rules to allow for this mechanism to act as the flow equalization. **A motion was made by Commissioner Whisenant, seconded by Commissioner Jones to authorize Institutional OSSF Permit and grant a variance to Section 10-M(B) of the Hays County Rules for On-Site Sewage Facilities at 4620 West Hwy 290, Dripping Springs, TX.
